## PRODUCT NOVELTY: PARA-X MAGNETIC CAN HOLDER

### THE ULTIMATE CAN HOLDER!

On July 1st, 2024, PARAT will present the revolutionary PARA-X Magnetic Can Holder, a practical solution for storing aerosol cans efficiently and securely. The holder is an innovative combination of functionality and design that improves daily work in workshops, machines, and transporters.

The PARA-X Magnetic Can Holder has been specifically designed for aerosol cans with a diameter of 65mm and an inner fold ("necked-in", e.g. WD-40, Ballistol). Thanks to the snap-in function, aerosol cans can be easily attached to the holder with a simple click. Convenient feature: When applying, the can stays in the PARA-X and only needs to be removed when replacing it with a new one. This makes it easy to place the can and holder on nearly any metal surface.

Each feature of the PARA-X is meticulously designed to streamline workflow and facilitate easy handling: two strong magnets ensure flexible application. The bottom magnet provides stability and prevents accidental can tipping. The vertical magnet allows for easy side mounting to any metallic surface. The holder's side magnet is rubber-coated to prevent slipping and protect sensitive surfaces from scratches. The PARA-X design offers convenient openings to ensure that important product information on the can remains visible at all times.

Discover the PARA-X and see how this innovative solution can streamline your workflow and improve efficiency. The PARA-X Magnetic Can Holder is now available.

Strongly adheres to any metallic surface – magnets on the bottom and sides make it simple to attach to any magnetic surface.

### Image 04:

*802010996\_parat\_magnetic\_can\_holder\_para-x\_main*

Firm hold thanks to an easy snap-in function – the PARA-X not only secures aerosol cans to any magnetic surface but also firmly snaps the can in place, preventing messy working areas and tipping cans.
